

# WOJEK

Wojek is an on-chain NFT collection, that lives permanently on the Ethereum network. Each Wojek is unique and is randomly constructed from a variety of recognizable wojak features.

## **ETHOS:**

Wojek's are totally censorship resistant. The project isn't pushing any boundaries of copyright or free speech, however, by developing the project completely on-chain, we hope to add to the community of projects that grow the decentralization movement.

## **MINTING (WHAT IS A SERIES):**

Series act as multiple minting periods and will include more and more attributes.

The first mint will be series zero, with only the basic attributes added. And once all series zero Wojek's are minted, series one attributes will be added to the pool of possible traits, and more mints will be made available.

However, the total supply of Wojeks is hard coded at ten thousand.

## **RARITY:**

As more attributes are added to the pool of possible traits, early series attributes will become rarer.

There is also one attribute that only appears on 5% of Wojek's, the [phunked attribute](#). A homage to CryptoPhunks.
